Solution Guide
Enabling Meridian Navigation in Monscierge CMS and Connect

This document explains how to enable Meridian Navigation features within the Monscierge Connect mobile app via the Monscierge Connect CMS. This document assumes that an Aruba Beacon network has been deployed following Aruba’s best practices.

Configuring Monscierge CMS

While logged into the Meridian App Server, click the username on the right-hand side of the navigation bar and select Account, then click Location beneath the Settings page header.

![Figure 1: Select Location From the Account Settings Menu](image)

After navigating to the Location page within Settings, find and copy the number in the ID field.

![Figure 2: Copy the ID Number from the Location Page](image)
While logged into Monscierge CMS, click Configuration on the left navigation pane, and select Navigation from the menu below the page header. Enter the number previously copied from the Meridian App Server into the Meridian App ID field and click Update.

Using Meridian Navigate within Monscierge Connect

After completing the above steps, the navigate functionality will be active for the client property in the Monscierge Connect mobile app. From the app home screen, search for the client property and select the property’s name from the list of results to navigate to the property’s home screen. Swipe right to reveal the left navigation menu and from this menu select the Navigate option.
