

Aruba Networks and MobileAccess

The MobileAccess Universal Wireless Network is a highly flexible in-building wireless solution that is ideally suited for the rapidly evolving wireless requirements of today's enterprises. With its advanced Wire-It-Once™ technology, organizations can provide facility-wide coverage for Wireless LAN (WLAN) and all of their other wireless service requirements over a single infrastructure. Using this innovative deployment approach, organizations can deliver pervasive WLAN coverage cost-effectively while also minimizing their operational expenses. Joint testing demonstrated that Aruba WLAN services work seamlessly and transparently over the MobileAccess Universal Wireless Network.

Aruba and MobileAccess Joint Solution

Why Aruba & MobileAccess

The MobileAccess MA-860 can transform a WLAN deployment into a comprehensive multi-services wireless solution.

One Investment for Multiple Services

- Delivers WLAN and other wireless services over a single infrastructure
- Spreads WLAN deployment costs across multiple wireless services

Pervasive WLAN Applications

- A MobileAccess Universal Wireless deployment delivers "wall-to-wall" WLAN coverage
- Fosters mobility applications like Voice over WLAN (VoWLAN) and real-time location services (RTLS)

Secure and Manageable APs

- Clusters APs in wiring closets increasing physical security

UNIVERSAL WIRELESS NETWORK WITH INTEGRATED WLAN CAPABILITIES:

Cost-Effective Multi-Service Solution

- Delivers Aruba WLAN cost-effectively by spreading infrastructure costs across multiple wireless services.

Transparent to WLAN Applications

- MobileAccess WLAN architecture mirrors the behaviors of "AP-on-ceiling" deployments, ensuring transparent support for Aruba's advanced user-centric capabilities.

Lower WLAN Operational Expenses

- Clustering APs in secure wiring closets simplifies ongoing maintenance and improves physical security.

Broader WLAN Deployments

- Spreading deployment costs across multiple wireless services enables larger-scale WLAN implementations, increasing the viability of advanced applications such as Voice over WLAN (VoWLAN) and real-time locations services (RTLS).

EXTEND THE BENEFITS OF YOUR WLAN

No other in-building wireless infrastructure vendor offers an integrated, fully-functional WLAN capability supporting 802.11b/g/ and 802.11a. Those that do advertise WLAN support have fundamental shortcomings that interfere with many advanced WLAN features and applications. While the MobileAccess WLAN solution alters the physical positioning of APs as compared to a conventional deployment, it remains seamless from an applications perspective and mirrors the AP coverage footprint. The MobileAccess approach to WLAN remains transparent while supporting all of Aruba's advanced WLAN capabilities.

Features include:

Dependable WLAN Coverage

- One-Click compensation ensures optimal 802.11a/b/g coverage
- Dedicated AP-to-antenna relationships ensure transparent support for WLAN features, such as RTLS, dynamic power control, and rogue detection
- Redundant power option mitigates single point of failure concerns

Standard WLAN Design Rules

- MA-860 WLAN designs use the same channel management and link budget rules as in traditional AP deployments
- With MA-860, IT managers can use a standard WLAN design to deploy a multi-service solution

LAN-Like Management

- Remote SNMP-based monitoring for status, alerts and fault detection
- Monitoring extends from MA-860 to WCEs and broadband antennas
- Intuitive graphical user interface provides familiar, LAN-like management experience

Results for customers include an improved business case for WLAN, as one investment enables multiple services, and spreads deployment costs across them. MobileAccess also greatly reduces WLAN operating costs, by enabling the clustering of APs in wiring closets where they are more secure and easier to service. Finally, WLANs can now be deployed even more broadly, because a MobileAccess WLAN deployment delivers "wall-to-wall" WLAN coverage and sets the stage for advanced applications like Voice over WLAN (VoWLAN) and real-time location services (RTLS).

About Aruba

People move. Networks must follow. Aruba securely delivers networks to users, wherever they work or roam. Our unified mobility solutions use Wi-Fi networks, identity-based security, remote access and cellular solutions, and centralized network management services to move in lock-step with users. The cost, convenience, and security benefits of Aruba's unified mobility solutions are fundamentally changing how and where we work. To learn more, visit us at www.arubanetworks.com.

About MobileAccess

MobileAccess provides a universal wireless platform for connecting the people and applications that drive business. The MobileAccess Universal Wireless Network is the key to widespread wireless connectivity in hospitals, office buildings, public venues and other large-scale facilities. The company's intelligent, in-building infrastructure delivers business-quality performance and scalability to thousands of customers, including Fortune 1000 companies such as Lehman Brothers, leading healthcare facilities such as Northwestern Memorial Hospital, as well as many public sector customers such as Aladdin Casino and ALLTEL Stadium.
