

# Reimagining the guest experience with a worry-free wireless network

Wireless connectivity is one of the critical components of the guest experience in hotels. Anantara required a secure and flexible wireless infrastructure that could support its digital transformation initiatives and provide a model hotel experience to its guests.

“ We need to constantly evolve with customer-facing technologies and get ahead of guest expectations to enable a truly smart digital hotel. The Aruba wireless infrastructure allows us to provide simplified, secure, and personalised services to our guests and staff. ”

**MOHAMED SAED**  
 Head of IT, Seven Tides International

## REQUIREMENTS

- Consistent wireless connectivity for guests, regardless of where they are located at the property
- Deploy a high-performance network to support HD-streaming, IoT applications, and back-office systems such as PMS
- Support a high density of devices and eliminate all dead spots

## SOLUTION

- Aruba 802.11ax Indoor & Outdoor APs
- Aruba 7200 Series Mobility Controllers

## OUTCOMES

- Ensures high availability so that guest care service can remain the number one priority
- Provides insights into traffic patterns and network usage
- Optimises the performance of mission-critical applications
- Auto-adapts to changing environments and applications
- Simplifies AP management
