**DATA SHEET**

**ARUBA 3810 SWITCH SERIES**

**PRODUCT OVERVIEW**
The Aruba 3810 Switch Series provides performance and resiliency for enterprises, SMBs, and branch office networks. With HPE Smart Rate multi-gigabit ports for high speed access points and IoT devices, this advanced Layer 3 network switch delivers a better application experience with low latency, virtualization with resilient stacking technology, and line rate 40GbE for plenty of back haul capacity.

A powerful Aruba ProVision ASIC delivers performance, robust feature support, and value with flexible programmability for the latest applications. The 3810 delivers resiliency and scalability via innovative backplane stacking technology and redundant, hot-swappable power supplies all in a convenient 1U form factor. It supports an advanced Layer 2 and 3 feature set with OSPF, IPv6, IPv4 BGP, Dynamic Segmentation, robust QoS, and policy-based routing are included with no software licensing.

Easy to deploy, use and manage using Aruba AirWave or Aruba Central. Aruba ClearPass offers centralized security and external captive portal support. The switches offer a limited lifetime warranty.

**ENHANCED CAPABILITIES**

**Software-defined networks**
- Supports multiple programmatic interfaces, including REST APIs and Openflow 1.0 and 1.3, to enable automation of network operations, monitoring, and troubleshooting

**Unified wired and wireless support**
- Aruba ClearPass Policy Manager provides profiling, authentication, and policy management across multi-vendor wired and wireless networks
- Switch auto-configuration automatically configures switch for different settings such as VLAN, CoS, PoE max power, and PoE priority when an Aruba access point is detected
- User Role defines a set of switch-based policies in areas such as security, authentication, and QoS. A user role can be assigned to a group of users or devices, using switch-based local user role or download from ClearPass
- For improved network simplicity and security, Aruba Dynamic Segmentation automatically enforces user, device and application-aware policies on Aruba wired and wireless networks. Automated device profiling, role-based access control, and Layer 7 firewall features deliver enhanced visibility and performance for a better overall experience for both IT and end-users alike
- Dynamic Segmentation provides a secure tunnel that transports network traffic on a per-port or per-user role basis to an Aruba Controller. In a per-user role Tunnel Node, users are authenticated by the ClearPass Policy Manager which directs traffic to be tunneled to an Aruba controller or switch locally
- Static IP Visibility allows ClearPass to do accounting for clients with static IP addresses

**Quality of Service (QoS)**
- Advanced classifier-based QoS classifies traffic using multiple match criteria based on Layer 2, 3, and 4 information; applies QoS policies such as setting priority level and rate limit to selected traffic on a per-port or per-VLAN basis
- Layer 4 prioritization based on TCP/UDP port numbers
- Class of Service (CoS) sets the IEEE 802.1p priority tag based on IP address, IP Type of Service (ToS), Layer 3 protocol, TCP/UDP port number, source port, and DiffServ
• Bandwidth shaping
  - Port-based rate limiting provides per-port ingress-/egress-enforced increased bandwidth
  - Classifier-based rate limiting uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port
  - Supports per-port, per-queue egress-based reduced bandwidth
• Remote intelligent mirroring mirrors selected ingress/egress traffic based on an ACL, port, MAC address, or VLAN to a local or remote HPE 8200 zl, 6600, 6200 yl, 5400 zl, 5400R, or 3500 Switch anywhere on the network
• Remote monitoring (RMON), Extended RMON (XRMON), and sFlow provide advanced monitoring and reporting capabilities for statistics, history, alarms, and events
• Traffic prioritization allows real-time traffic classification into eight priority levels that are mapped to eight queues
• Unknown Unicast Rate Limiting throttles unicast packets with unknown destination addresses and limits flooding on the VLAN

Simplified management and configuration
• Flexible management – Supports both cloud-based Central and on-premise AirWave without ripping and replacing switching infrastructure
• Aruba Central cloud-based management platform offers simple, secure, and cost effective way to manage switches
• Built-in programmable and easy to use REST API interface provides configuration automation for campus networks
• Friendly port names allows assignment of descriptive names to ports
• IEEE 802.1AB Link Layer Discovery Protocol (LLDP) advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications
• Command authorization leverages RADIUS to link a custom list of CLI commands to an individual network administrator’s login; an audit trail documents activity
• Multiple configuration files stores easily to the flash image
• Dual flash images provides independent primary and secondary operating system files for backup while upgrading
• Out-of-band Ethernet management port enables management over a separate physical management network; and keeps management traffic segmented from network data traffic

• Zero Touch Provisioning (ZTP) simplifies installation of the switch infrastructure using Aruba Activate-based or DHCP-based process with AirWave and Central Network Management
• Unidirectional link detection (UDLD) monitors the link between two switches and blocks the ports on both ends of the link if the link goes down at any point between the two devices
• IP SLA for Voice Monitor quality of voice traffic with UDP Jitter and UDP Jitter for VoIP tests

Connectivity
• Jumbo frames on Gigabit Ethernet and 10-Gigabit Ethernet ports allow high-performance remote backup and disaster-recovery services
• IEEE 802.3at Power over Ethernet (PoE+) provides up to 30 W per port that allows support of the latest PoE+ capable devices such as IP phones, wireless access points, and security cameras, as well as any IEEE 802.3af compliant end device; eliminates the cost of additional electrical cabling and circuits that would otherwise be necessary in IP phone and WLAN deployments
• Support for pre-standard PoE detects and provides power to pre-standard PoE devices
• Choice of uplinks
  - SFP+ uplink models provide fiber-optic (up to 70 km) or direct-attach-cable (DAC) connectivity
  - 10GBASE-T uplink models offer 10GbE speeds, using standard RJ-45 connectors and standard twisted-pair cabling up to 100 m
• Auto-MDIX provides automatic adjustments for straight-through or crossover cables on all RJ-45 ports
• IPv6
  - IPv6 host enables switch management in an IPv6 network
  - Dual stack (IPv4 and IPv6) transitions IPv4 to IPv6, supporting connectivity for both protocols
  - MLD snooping forwards IPv6 multicast traffic to the appropriate interface
  - IPv6 ACL/QoS supports ACL and QoS for IPv6 traffic
  - IPv6 routing supports static, RIPng, OSPFv3 routing protocols
  - 6in4 tunneling supports encapsulation of IPv6 traffic in IPv4 packets
  - Security provides RA guard, DHCPv6 protection, dynamic IPv6 lockdown, and ND snooping
Performance and efficiency

- Selectable queue configurations allows for increased performance by selecting the number of queues and associated memory buffering that best meet the requirements of the network applications
- Energy-efficient design
  - 80 PLUS Silver Certified Power Supply increases power efficiency and savings
  - Energy-efficient Ethernet (EEE) support reduces power consumption in accordance with IEEE 802.3az
- Meshed stacking technology
  - High-performance stacking provides up to 336 Gbps of stacking throughput; each 4-port stacking module can support up to 42 Gbps in each direction per stacking port
  - Ring, chain, and mesh topologies support up to a 10-member ring or chain and 5-member fully meshed stacks; meshed topologies offer increased resiliency vs. a standard ring
  - Virtualized switching provides simplified management as the switches appear as a single chassis when stacked
  - Aruba Provision ASIC provides very low latency, increased packet buffering, and adaptive power consumption

Resiliency and high availability

- Virtual Router Redundancy Protocol (VRRP) allows groups of two routers to back each other up dynamically to create highly available routed environments in IPv4 and IPv6 networks
- Nonstop switching and routing improves network availability to better support critical applications, such as unified communication and mobility; traffic will continue to be forwarded during failovers, when the backup member of the stack becomes the commander
- IEEE 802.3ad Link Aggregation Protocol (LACP) and Hewlett Packard Enterprise port trunking support up to 144 trunks, each with up to 8 links (ports) per trunk
- IEEE 802.1s Multiple Spanning Tree provides high link availability in multiple VLAN environments by allowing multiple spanning trees; provides legacy support for IEEE 802.1d and IEEE 802.1w
- Dual hot-swappable power supplies
  - Increased resiliency with secondary power supply providing complete switch power redundancy in case of power line or supply failure
  - Secondary power supply increases available PoE+ power
  - Distributed trunking enables loop-free and redundant network topology without using Spanning Tree Protocol; allows a server or switch to connect to two switches using one logical trunk for redundancy and load sharing

Layer 2 switching

- IEEE 802.1ad QinQ increases the scalability of an Ethernet network by providing a hierarchical structure; connects multiple LANs on a high-speed campus or metro network
- VLAN support and tagging supports the IEEE 802.1Q standard and 4096 VLANs simultaneously
- IEEE 802.1v protocol VLANs isolate select non-IPv4 protocols automatically into their own VLANs
- MAC-based VLAN provides granular control and security; uses RADIUS to map a MAC address/user to specific VLANs
- Rapid Per-VLAN Spanning Tree (RPVST+) allows each VLAN to build a separate spanning tree to improve link bandwidth usage; is compatible with PVST+
- Aruba 3810 switch meshing dynamically load balances across multiple active redundant links to increase available aggregate bandwidth; allows concurrent Layer 3 routing
- GVRP and MVRP allows automatic learning and dynamic assignment of VLANs

Layer 3 services

- Loopback interface address defines an address in Routing Information Protocol (RIP) and Open Shortest Path First (OSPF), improving diagnostic capability
- Route maps provide more control during route redistribution; allow filtering and altering of route metrics
- User datagram protocol (UDP) helper function allows UDP broadcasts to be directed across router interfaces to specific IP unicast or subnet broadcast addresses; and helps prevent server spoofing for UDP services such as DHCP
- DHCP server centralizes and reduces the cost of IPv4 address management
- Bidirectional Forwarding Detection (BFD) enables link connectivity monitoring and reduces network convergence time for static route, OSPFv2, and VRRP

Layer 3 routing

- Static IP routing provides manually configured routing for both IPv4 and IPv6 networks
- OSPF provides OSPFv2 for IPv4 routing and OSPFv3 for IPv6 routing
- Policy-based routing makes routing decisions based on policies set by the network administrator
- Border Gateway Protocol (BGP) provides IPv4 Border Gateway Protocol routing, which is scalable, robust, and flexible
- Routing Information Protocol (RIP) provides RIPv1, RIPv2, and RIPng
Security

- Control Plane Policing sets rate limit on control protocols to protect CPU overload from DOS attacks
- Source-port filtering allows only specified ports to communicate with each other
- RADIUS/TACACS+ eases switch management security administration by using a password authentication server
- Secure shell encrypts all transmitted data for secure remote CLI access over IP networks
- Secure Sockets Layer (SSL) encrypts all HTTP traffic, allowing secure access to the browser-based management GUI in the switch
- Port security allows access only to specified MAC addresses, which can be learned or specified by the administrator
- Radius over TLS (RadSec) allows users to use a more secure and reliable mode of communications between switch and radius servers over unsecure networks
- MAC address lockout prevents particular configured MAC addresses from connecting to the network
- Detection of malicious attacks monitors 10 types of network traffic and sends a warning when an anomaly that potentially can be caused by malicious attacks is detected
- Secure FTP allows secure file transfer to and from the switch; protects against unwanted file downloads or unauthorized copying of a switch configuration file
- Switch management logon security helps secure switch CLI logon by optionally requiring either RADIUS or TACACS+ authentication
- Secure management access delivers secure encryption of all access methods (CLI, GUI, or MIB) through SSHv2, SSL, and/or SNMPv3
- ICMP throttling defeats ICMP denial-of-service attacks by enabling any switch port to automatically throttle ICMP traffic automatically
- Identity-driven ACL enables implementation of a highly granular and flexible access security policy and VLAN assignment specific to each authenticated network user
- STP BPDU port protection blocks Bridge Protocol Data Units (BPDUs) on ports that do not require BPDUs, preventing forged BPU attacks
- Dynamic IP lockdown works with DHCP protection to block traffic from unauthorized hosts, preventing IP source address spoofing
- DHCP protection blocks DHCP packets from unauthorized DHCP servers, preventing denial-of-service attacks
- Dynamic ARP protection blocks ARP broadcasts from unauthorized hosts, preventing eavesdropping or theft of network data

- STP root guard protects the root bridge from malicious attacks or configuration mistakes
- Management Interface Wizard helps secure management interfaces such as SNMP, telnet, SSH, SSL, Web, and USB at the desired level
- Security banner displays a customized security policy when users log in to the switch
- Switch CPU protection provides automatic protection against malicious network traffic trying to shut down the switch
- ACLs provide filtering based on the IP field, source/destination IP address/subnet and source/destination TCP/UDP port number on a per-VLAN or per-port basis
- Multiple authentication methods
  - IEEE 802.1X authenticates multiple IEEE 802.1X users per port; prevents a user from “piggybacking” on another user’s authentication
  - Supports web-based authentication
  - MAC-based client authentication
  - Concurrent authentication modes enables a switch port to accept up to 32 sessions of 802.1X, Web, and MAC authentication
- Private VLAN provides network security by restricting peer-to-peer communication to prevent a variety of malicious attacks; typically a switch port can only communicate with other ports in the same community and/or an uplink port, regardless of VLAN ID or destination MAC address
- IEEE 802.1AE MACsec provides security on a link between two switch ports (1Gbps or 10Gbps) using standard encryption and authentication
- Open Authentication Role simplifies first-time deployment of AAA in brownfield deployments by allowing full network access for failed clients and provides instant connectivity as soon as a client is plugged-in
- Critical Authentication Role ensures that important infrastructure devices such as IP phones are allowed network access even in the absence of a RADIUS server
- MAC Pinning allows non-chatty legacy devices to stay authenticated by pinning client MAC addresses to the port until the clients logoff or get disconnected
- Enrollment over Secure Transport (EST) enhances the switch PKI infrastructure with a simpler, scalable and more secure method of certificate provisioning, re-enrollment and renewal
**Convergence**

- IP multicast snooping (data-driven IGMP) prevents flooding of IP multicast traffic
- LLDP-MED (Media Endpoint Discovery) defines a standard extension of LLDP that stores values for parameters such as QoS and VLAN to configure network devices such as IP phones automatically
- PoE allocations supports multiple methods (automatic, IEEE 802.3af class, LLDP-MED, or user-specified) to allocate PoE power for more efficient energy savings
- Protocol Independent Multicast for IPv6 supports one-to-many and many-to-many media casting use cases such as IPTV over IPv6 networks
- IP multicast routing includes PIM sparse and dense modes to route IP multicast traffic
- Auto VLAN configuration for voice
  - RADIUS VLAN uses a standard RADIUS attribute and LLDP-MED to configure a VLAN automatically for IP phones
  - CDPv2 uses CDPv2 to configure legacy IP phones
- Local MAC Authentication assigns attributes such as VLAN and QoS using locally configured profile that can be a list of MAC prefixes

**Warranty, services and support**

- Limited Lifetime Warranty, see [https://www.arubanetworks.com/support-services/product-warranties/](https://www.arubanetworks.com/support-services/product-warranties/) for warranty and support information included with your product purchase
- For Software Releases and Documentation, refer to [https://asp.arubanetworks.com/downloads](https://asp.arubanetworks.com/downloads)
- For support and services information, visit [https://www.arubanetworks.com/support-services/arubacare/](https://www.arubanetworks.com/support-services/arubacare/)

### Included accessories

- 1 Aruba 3810 Switch Fan Tray (JL088A)

### I/O ports and slots

- **Aruba 3810M 48G PoE+ 1-slot Switch (JL074A):**
  - 48 RJ-45 autosensing 10/100/1000 PoE+ ports (IEEE 802.3 Type 10BASE-T, IEEE 802.3u Type 100BASE-TX, IEEE 802.3ab Type 1000BASE-T, IEEE 802.3at PoE+);
  - Duplex: 10BASE-T/100BASE-TX: half or full; 1000BASE-T: full only;
  - Ports 1 – 48 support MACSec
  - 1 open module slot
  - Supports a maximum of 4 SFP+ ports or 2 40GbE ports, with optional module or 4 Smart Rate ports

- **Aruba 3810M 16SFP+ 2-slot Switch (JL075A):**
  - 16 SFP+ fixed 1000/10000 SFP+ ports; Duplex: 100BASE-TX: half or full; 1000BASE-T: full only;
  - Ports 1 – 16 support MACSec
  - 2 open module slots
  - Supports a maximum of 8 SFP+ ports or 2 40GbE ports, with optional module or 4 Smart Rate ports

- **Aruba 3810M 40G 8 HPE Smart Rate PoE+ 1-slot Switch (JL076A):**
  - 40 RJ-45 autosensing 10/100/1000 PoE+ ports (IEEE 802.3 Type 10BASE-T, IEEE 802.3u Type 100BASE-TX, IEEE 802.3ab Type 1000BASE-T, IEEE 802.3at PoE+);
  - Duplex: 10BASE-T/100BASE-TX: half or full; 1000BASE-T: full only;
  - Ports 1 – 40 support MACSec
  - 8 RJ-45 HPE Smart Rate Multi-Gigabit ports (100M, 1/2.5/5GbE and 10GbE);
  - Ports 1 – 8 support MACSec
  - 1 open module slot
  - Supports a maximum of 4 SFP+ ports or 2 40GbE ports, with optional module or 4 Smart Rate ports

### Additional ports and slots

- **Aruba 3810M 48G PoE+ 1-slot Switch (JL074A):**
  - 1 stacking module slot
  - 1 RJ-45 serial console port
  - 1 RJ-45 out-of-band management port
  - 1 dual-personality (RJ-45 or USB micro-B)

- **Aruba 3810M 16SFP+ 2-slot Switch (JL075A):**
  - 1 stacking module slot
  - 1 RJ-45 serial console port
  - 1 RJ-45 out-of-band management port
  - 1 dual-personality (RJ-45 or USB micro-B)

- **Aruba 3810M 40G 8 HPE Smart Rate PoE+ 1-slot Switch (JL076A):**
  - 1 stacking module slot
  - 1 RJ-45 serial console port
  - 1 RJ-45 out-of-band management port
  - 1 dual-personality (RJ-45 or USB micro-B)

### Power supplies

- 2 power supply slots
- 1 minimum power supply required (ordered separately)

### Fan tray

- Includes:
  - 1 x JL088A
  - 1 fan tray slot
  - Switch ships with 1 JL088A fan tray installed. Spares ordered separately.

### Physical characteristics

- **Dimensions:** 17.42(w) x 16.98(d) x 1.73(h) in
  - (44.25 x 43.13 x 4.39 cm) (1U height)
- **Weight:** 13.62 lb (6.18 kg)

### Memory and processor

- **Aruba 3810M 48G PoE+ 1-slot Switch (JL074A):**
  - P2020 Dual Core @ 1.2 GHz, 4 GB DDR3 SDRAM, 1 GB SD Card
  - Dual ARM Cortex A9 @ 1 GHz, 2 GB DDR3 SDRAM, Packet buffer size: 13.5 MB Internal

- **Aruba 3810M 16SFP+ 2-slot Switch (JL075A):**
  - P2020 Dual Core @ 1.2 GHz, 4 GB DDR3 SDRAM, 1 GB SD Card
  - Dual ARM Cortex A9 @ 1 GHz, 2 GB DDR3 SDRAM, Packet buffer size: 13.5 MB Internal

- **Aruba 3810M 40G 8 HPE Smart Rate PoE+ 1-slot Switch (JL076A):**
  - P2020 Dual Core @ 1.2 GHz, 4 GB DDR3 SDRAM, 1 GB SD Card
  - Dual ARM Cortex A9 @ 1 GHz, 2 GB DDR3 SDRAM, Packet buffer size: 13.5 MB Internal

**Aruba 3810 Switch Series**

- **Switches**:
  - Aruba 3810M 48G PoE+ 4SFP+ 680W Switch (JL428A)
  - Aruba 3810M 48G PoE+ 4SFP+ 1050W Switch (JL429A)
  - Aruba 3810M 24SFP+ 250W Switch (JL430A)

- **Mounting**:
  - Mounts in an EIA-standard 19 in. telco rack or equipment cabinet (hardware included); Horizontal surface mounting only

- **Latency**:
  - 1000 Mb: < 2.8 µs (FIFO 64-byte packets)
  - 10 Gbps: < 1.8 µs (FIFO 64-byte packets)
  - 40 Gbps: < 1.5 µs (FIFO 64-byte packets)

- **Throughput**:
  - Up to 190.5 Mpps (64-byte packets)

- **Switching Capacity**:
  - 320 Gbps

- **Fabric Speed**:
  - 338 Gbps

- **Routing Table Size**:
  - 10000 entries (IPv4), 5000 entries (IPv6)

- **MAC Address Table Size**:
  - 64000 entries

- **Operating Temperature**:
  - 32°F to 113°F (0°C to 45°C)

- **Operating Relative Humidity**:
  - 15% to 95% @ 104°F (40°C), noncondensing

- **Nonoperating/Storage Temperature**:
  - -40°F to 158°F (-40°C to 70°C)

- **Nonoperating/Storage Relative Humidity**:
  - 15% to 90% @ 149°F (65°C), noncondensing

- **Altitude**:
  - Up to 10,000 ft (3 km)

- **Acoustic**:
  - Power: 47 dB, Pressure: 29.4 dB

**Notes**
- Idle power is the actual power consumption of the device with no ports connected. Maximum power rating and maximum heat dissipation are the worst case theoretical maximum numbers provide for planning the infrastructure with fully loaded PoE (if equipped), 100% traffic, all ports plugged in, and all modules populated. This is a modular product.

*Switch + 2 power supplies + one JL083A Uplink. For most accurate heat dissipation, idle and max power for any combination of chassis and accessories, please consult configurator.

**Safety**

STANDARDS AND PROTOCOLS
(APPLIES TO ALL PRODUCTS IN SERIES)

BGP
- RFC 1997 BGP Communities Attribute
- RFC 2918 Route Refresh Capability
- RFC 4271 A Border Gateway Protocol 4 (BGP-4)
- RFC 4456 BGP Route Reflection: An Alternative to Full Mesh Internal BGP (IBGP)
- RFC 4724 Graceful Restart Mechanism for BGP
- RFC 5492 Capabilities Advertisement with BGP-4

Denial of service protection
- CPU DoS Protection

Device management
- RFC 1591 DNS (client)
- RFC 2576 (Coexistence between SNMP V1, V2, V3)
- RFC 2579 (SMIv2 Text Conventions)
- RFC 2580 (SMIv2 Conformance)
- RFC 3416 (SNMP Protocol Operations v2)
- RFC 3417 (SNMP Transport Mappings)
- HTML and telnet management

General protocols
- IEEE 802.1ad Q-in-Q
- IEEE 802.1AX-2008 Link Aggregation
- IEEE 802.1D MAC Bridges
- IEEE 802.1p Priority
- IEEE 802.1Q VLANs
- IEEE 802.1s Multiple Spanning Trees
- IEEE 802.1v VLAN classification by Protocol and Port
- IEEE 802.1w Rapid Reconfiguration of Spanning Tree
- IEEE 802.3ad Link Aggregation Control Protocol (LACP)
- IEEE 802.3af Power over Ethernet
- IEEE 802.3az Energy Efficient Ethernet
- IEEE 802.3x Flow Control
- IEEE 802.3bz 2.5 Gbps and 5 Gbps interfaces
- RFC 768 UDP
- RFC 783 TFTP Protocol (revision 2)
- RFC 792 ICMP
- RFC 793 TCP
- RFC 826 ARP
- RFC 854 Telnet
- RFC 868 Time Protocol
- RFC 951 BOOTP
- RFC 1058 RIPv1
- RFC 1350 TFTP Protocol (revision 2)
- RFC 1519 CIDR
- RFC 1542 BOOTP Extensions
- RFC 1918 Address Allocation for Private Internet
- RFC 2030 Simple Network Time Protocol (SNTP) v4
- RFC 2131 DHCP
- RFC 2453 RIPv2
- RFC 2548 (MS-RAS-Vendor only)
- RFC 3046 DHCP Relay Agent Information Option
- RFC 3575 IANA Considerations for RADIUS
- RFC 3576 Ext to RADIUS (CoA only)
- RFC 3768 VRRP
- RFC 4675 RADIUS VLAN & Priority
- RFC 5798 VRRP (exclude Accept Mode and sub-sec timer)
- RFC 5880 Bidirectional Forwarding Detection
- UDLD (Uni-directional Link Detection)

IP multicast
- RFC 3376 IGMPv3
- RFC 3973 PIM Dense Mode
- RFC 4601 PIM

IPv6
- RFC 1981 IPv6 Path MTU Discovery
- RFC 2080 RIPvng for IPv6
- RFC 2081 RIPvng Protocol Applicability Statement
