The affordable mid-range Aruba 303 Series campus access point delivers high performance 802.11ac with MU-MIMO (Wave 2) for medium density enterprise environments. With the integrated BLE and supporting 802.3af power, the Aruba 303 Series AP enables enterprises to improve their work efficiency and productivity with the lowest TCO.

The compact Aruba 303 Series AP delivers a maximum concurrent data rate of 867 Mbps in the 5GHz band and 300 Mbps in the 2.4GHz band (for an aggregate peak data rate of 1.2Gbps). Featuring 2x2:2SS, the Aruba 303 is designed for medium device density environments, such as schools, retail branches, warehouses, hotels and enterprise offices, where the environment is cost sensitive.

The 303 Series AP has an integrated Bluetooth Low-Energy (BLE) radio, which can be used as an Aruba beacon for advanced locationing, indoor wayfinding, asset tracking, and to enable proximity-based push notification services. The integrated beacon radio also enables the remote management of battery-powered and other standalone beacons in a large-scale network of Aruba beacons. It enables businesses to leverage mobility context to develop applications that will deliver an enhanced user experience and increase the value of the wireless network for organizations.

    to classify and block, prioritize or limit bandwidth for over
    2,500 enterprise apps or groups of apps
• RF Management
  • Adaptive Radio Management (ARM) technology with
    AirMatch automatically assigns channel, width and power
    settings based on environment and client density. It also
    provides airtime fairness and ensures that APs stay clear
    of all sources of RF interference to deliver reliable, high-
    performance WLANs
  • The Aruba 303 Series Access Points can be configured
    to provide part-time or dedicated air monitoring for
    spectrum analysis and wireless intrusion protection,
    VPN tunnels to extend remote locations to corporate
    resources, and wireless mesh connections where
    Ethernet drops are not available
• Spectrum analysis
  • Capable of part-time or dedicated air monitoring, the
    spectrum analyzer remotely scans the 2.4GHz and 5GHz
    radio bands to identify sources of RF interference from
    HT20 through VHT80 operation
• Aruba Secure Core
  • Device assurance: Use of Trusted Platform Module (TPM)
    for secure storage of credentials and keys as well as
    secure boot
  • Integrated wireless intrusion protection offers threat
    protection and mitigation, and eliminates the need for
    separate RF sensors and security appliances
  • IP reputation and security services identify, classify,
    and block malicious les, URLs and IPs, providing
    comprehensive protection against advanced
    online threats

Daisy-chain your wired network to connect and power any
network device (IP camera, IOT gateway, or even a second Access
Point) to the E1 Ethernet port of the AP-303P. Simplify and cost-
reduce the installation of multiple devices by sharing switch
ports and cabling.

**CHOOSE YOUR OPERATING MODE**

The Aruba 303 Series Access Points offer a choice of deployment
and operating modes to meet your unique management and
deployment requirements:

• The 303 Series AP is a unified AP that supports both
  controller-based and controller-less deployment modes,
  providing maximum flexibility.
• Controller-based mode – When deployed in conjunction
  with an Aruba Mobility Controller, Aruba 303 Series
  Access Points offer centralized configuration, data
  encryption, policy enforcement and network services, as
  well as distributed and centralized traffic forwarding.
• Controller-less (Instant) mode – The controller function
  is virtualized in a cluster of APs in Instant mode. As the
  network grows and/or requirements change, Instant
  deployments can easily migrate to controller-based mode.
• Remote AP (RAP) mode for branch deployments
• Air monitor (AM) for wireless IDS, rogue detection
  and containment
• Spectrum analyzer (SA), dedicated or hybrid, for
  identifying sources of RF interference
• Secure enterprise mesh portal or point

For large installations across multiple sites, the Aruba Activate
service significantly reduces deployment time by automating
device provisioning, firmware upgrades, and inventory
management. With Aruba Activate, the APs can be factory-
shipped to any site and configure themselves when powered up.
