In outdoor and environmentally challenging locations such as oil rigs, mining facilities, and industrial plants, networks need to be protected from extreme temperatures, flammable gas, vapor, and dust concentrations. With Class 1 Division 2 and ATEX Zone 2, the Aruba 370EX Series Access Points deliver hardened multi-gigabit Wi-Fi to hazardous locations.

The 370EX series provides a maximum aggregate data rate of over 2 Gbps (2.4GHz: 300Mbps; 5GHz: 1,733 Mbps) as well as multi-user MIMO (MU-MIMO), 4 spatial streams (4SS), and optional 160MHz channel bandwidth (VHT160) to quickly add performance and capacity to existing or new wireless networks.

**CERTIFIED FOR EXTREME WEATHER RESILIENCY**

Purpose-built to survive in the harshest environments, the 370EX Series have undergone extensive hazardous locations certification testing (Class 1 Division 2 for 375EX and 377EX, and ATEX Zone 2 for the AP-375ATEX) to demonstrate the ability to withstand exposure to high and low temperature extremes, windspeeds up to 165 mph, and tolerate persistent moisture, precipitation, and dust and salt sprays for extended periods of time. All electrical interfaces include industrial strength surge protection.

**MU-MIMO AWARE CLIENT OPTIMIZATION**

The 370EX Series includes Aruba’s patented ClientMatch technology to eliminate sticky client issues while optimizing 802.11ac Wave 2 performance. These APs continuously gather session performance metrics to steer mobile devices to the best-available AP – even while users roam. With MU-MIMO awareness, ClientMatch can group MU-MIMO capable devices together to increase network capacity and efficiency. ClientMatch also participates in Aruba’s AI-powered Mobility solution.

**KEY FEATURES**

- Deliver gigabit Wi-Fi to outdoor and extreme environments.
- 2 Gbps of maximum throughput
- WPA3 and Enhanced Open security
- Patented ClientMatch technology resolves sticky client issues and optimizes Wave 2 performance
- AI-powered AirMatch automates RF optimization
- IoT-ready with integrated Bluetooth Low Energy (BLE)
- Participates in Aruba’s Dynamic Segmentation solution

**IOT-READY**

The 370EX Series includes an integrated Bluetooth Low Energy radio to simplify the deployment and management of location services, asset tracking services, security solutions and IoT sensors. This allows organizations to leverage the 360 Series as an IoT platform, which eliminates the need for an overlay infrastructure and additional IT resources.

**ARUBA SECURE INFRASTRUCTURE**

The Aruba 370EX Series includes components of Aruba’s 360 Secure Fabric to help protect user authentication and wireless traffic. Select capabilities include:

**WPA3 and Enhanced Open**

Support for stronger encryption and authentication is provided via the latest version of WPA for enterprise protected networks.
Enhanced Open offers seamless new protection for users connecting to open networks where each session is automatically encrypted to protect user passwords and data on guest networks.

**WPA2-MPSK**
MPSK enables simpler passkey management for WPA2 devices – should the Wi-Fi password on one device or device type change, no additional changes are needed for other devices. Requires ClearPass Policy Manager.

**VPN Tunnels**
In Remote AP (RAP) and IAP-VPN deployments, the 370EX Series can be used to establish a secure SSL/IPSec VPN tunnel to a Mobility Controller that is acting as a VPN concentrator.

**Trusted Platform Module (TPM)**
For enhanced device assurance, all Aruba APs have an installed TPM for secure storage of credentials and keys, and boot code.

**SIMPLE AND SECURE ACCESS**
To simplify policy enforcement, the Aruba 370EX Series uses Aruba’s policy enforcement firewall (PEF) feature to encapsulate all traffic from the AP to the Mobility Controller (or Gateway) for end-to-end encryption and inspection. Policies are applied based on user role, device type, applications, and location. This reduces the manual configuration of SSIDs, VLANs and ACLs. PEF also serves as the underlying technology for Aruba Dynamic Segmentation.

**FLEXIBLE OPERATION AND MANAGEMENT**
A unique feature of Aruba APs is the ability to operate in either controllerless (Instant) or controller-based mode.

**Controller-less (Instant) mode**
In controllerless mode, one AP serves as a virtual controller for the entire network. Learn more about Instant mode in this technology brief.

**Mobility Controller mode**
For optimized network performance, roaming and security, APs tunnel all traffic to a mobility controller for centrally managed traffic forwarding and segmentation, data encryption, and policy enforcement. Learn more in the ArubaOS datasheet.

**Management options**
Aruba offers two network management options: cloud-based Aruba Central or Aruba AirWave for on-prem deployments. For organizations with the need for more flexible services, higher scale and performance, learn about the next generation management capabilities of **Aruba Central**, an AI powered network operations solution.

**ADDITIONAL FEATURES**
**Zero Touch Provisioning**
APs can be factory-shipped and zero-touch provisioned through Aruba Central or AirWave using a cloud-based service to reduce deployment time, centralize configuration, and manage inventory.

**Advanced Cellular Coexistence (ACC)**
Minimizes interference from 3G/4G LTE cellular networks, distributed antenna systems (DAS), and commercial small cell or femtocell equipment.

**Hardened, industrial design**
Extends the temperature range capabilities of indoor access points for environments that lack heating and cooling. It also provides sealed connector interfaces to protect against dust and moisture.
