The hardened, Aruba 518 Series access point delivers high Wi-Fi 6 performance in harsh, weather-protected environments such as warehouses, industrial freezers or enclosures in extreme environments such as stadiums. It delivers 4x4:4SS MU-MIMO capability, Aruba’s advanced ClientMatch and integrated Bluetooth to enable Aruba location services.

Purpose-built to survive in the harshest weather-protected environments, 518 Series APs withstand exposure to extreme high and low temperatures, persistent (non-precipitant) moisture, and are sealed to keep out airborne contaminants. All electrical interfaces include industrial strength surge protection.

Aruba Wi-Fi 6 access points provide high-performance connectivity in dense mobile and IoT environments. With maximum aggregate on air data rate of 3 Gbps (HE80/HE40), the 518 Series APs deliver the speed and reliability needed for demanding environments.

**INCREDIBLE EFFICIENCY**

The 518 Series APs are designed to optimize user experience by maximizing Wi-Fi efficiency and dramatically reducing airtime contention between clients.

Features include Uplink and Downlink Orthogonal Frequency Division Multiple Access (OFDMA), Downlink Multi-User MIMO (MU MIMO) and cellular co-location. With up to 4 spatial stream and 160 MHz channel capability, the 518 provides groundbreaking wireless capabilities for any application.

Read the Multi-User [802.11ax white paper](#) for further information.

**Advantages of OFDMA**

This capability allows Aruba Wi-Fi 6 APs to handle multiple Wi-Fi 6 enabled clients simultaneously on a single radio.
**IOT PLATFORM CAPABILITIES**

Aruba Wi-Fi 6 APs include an integrated Bluetooth 5 and 802.15.4 radio (for Zigbee support) to simplify deploying and managing IoT-based location services, asset tracking services, security solutions and IoT sensors. This allow organizations to leverage the 518 as an IoT platform, which eliminates the need for an overlay infrastructure and additional IT resources.

**Target Wake Time (TWT)**

Ideal for IoT solutions that communicate infrequently, this Wi-Fi 6 capability allows IoT devices to use 802.11ax protocol. TWT coordinates with client devices to allow them to sleep for extended periods and use shorter wake times to communicate before returning to sleep. This substantially extends the useful operating life of Wi-Fi 6 based battery powered sensors.

**ARUBA SECURE INFRASTRUCTURE**

The 518 Series is an integral part of Aruba’s zero trust security approach to help protect user authentication and wireless traffic. Select capabilities include:

- **WPA3 and Enhanced Open**
  
  With the introduction of WPA3 and Enhanced Open, a Wi-Fi 6 certified client will never send unencrypted traffic over the air. Even with an open authenticated network, Enhanced Open still provides strong encryption over the air.
  
  In all Wi-Fi 6 user sessions, each user is uniquely encrypted and if they disconnect and reconnect, the encryption changes from session to session.

- **WPA2-MSK**
  
  MSK enables simpler passkey management for WPA2 devices – should the Wi-Fi password on one device change, no additional changes are needed for other devices. This feature is enabled when networks are deployed with ClearPass Policy Manager.

- **VPN Tunnels**
  
  In Remote AP (RAP) and IAP-VPN deployments, the Aruba 518 can be used to establish a secure SSL/IPSec VPN tunnel to a Gateway or Mobility Controller that is configured as a VPN concentrator.

**Trusted Platform Module (TPM)**

For enhanced device assurance, all Aruba APs have an installed TPM for secure storage of credentials, keys and boot code.

**SIMPLE AND SECURE ACCESS**

To simplify policy enforcement, the Aruba 518 uses Aruba’s Policy Enforcement Firewall (PEF) to encapsulate all traffic from the AP to the Mobility Controller (gateway) for end-to-end encryption and inspection. Policies are applied based on context including user role, device type, application, and location. This reduces the manual configuration of SSIDs, VLANs, and ACLs. PEF also serves as the underlying technology for Aruba Dynamic Segmentation.

**HIGH DENSITY CONNECTIVITY**

Each 518 Series AP provides connectivity for a maximum of 512 associated clients per radio (1024 total).

**Flexible Operation and Management**

A unique feature of Aruba APs is the ability to operate in either controller-less or controller-based mode.

- **Controller-less (Instant) Mode**
  
  In controller-less mode, one AP serves as a virtual controller for the entire network. Learn more about Instant mode in this technology brief.

- **Mobility Controller Mode**
  
  For optimized network performance, roaming and security, APs tunnel all traffic to a mobility controller for central management of traffic forwarding, segmentation, encryption, and policy enforcement. Learn more in the ArubaOS datasheet.

**Management Options**

Available management choices includes Aruba Central (cloud-based) or Aruba AirWave (multi-vendor, on prem) solutions.

For large installations across multiple sites, Aruba APs can be shipped and activated with Zero Touch Provisioning through Aruba Central or AirWave. This reduces deployment time, centralizes configuration, and provides inventory visibility.
