

# A NEW HIGHER EDUCATION NETWORK CONSUMPTION MODEL

Higher education institutions are focused on delivering excellent student experiences in a hybrid learning environment while applications and collaboration tools move to the cloud, students use multiple devices to connect to their education, and IoT devices are added daily. IT departments must manage, support, and secure the network while trying to reduce costs. With Aruba as-a-service (aaS) solutions, they can keep pace with changing conditions with a secure, flexible, and accessible network.

## Top network management concerns for higher education

Privacy and network security

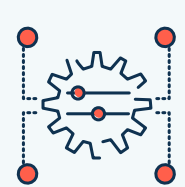

Lack of data analytics and actionable insights

Investment management

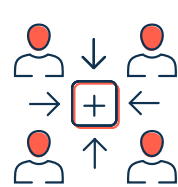

Quick, scalable management

Flexible network management

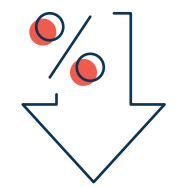

## Top network-as-a-service (NaaS) considerations for higher education organizations

Support for new initiatives and collaboration tools

Network capacity

Cost reduction

Reduced burden on IT

Business operations security

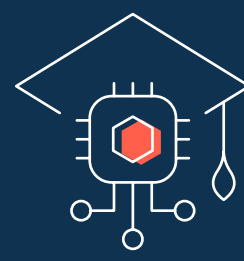

## Why adopt aaaS?

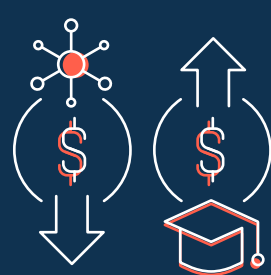

Enable **analytics and actionable insights** into network/application performance or student success to enhance performance and experiences

Enhance **collaborative hybrid learning** and enable an accessible campus to improve equity and keep up with new learning requirements

Use **superior technology** to attract new students, increase retention, and meet the needs of the evolving student experience

Reduce **upfront spend** on networking to focus on academic spends

Efficiently implement **digital initiatives** with enhanced security protocols and automation

## Aruba aaaS solutions

### ARUBA CENTRAL

- Cloud scalability for network management
- Latest network innovations
- Unified management of wireless, wired, and WAN environments

### HPE GREENLAKE FOR ARUBA

- NaaS ensures the latest technology solutions are deployed
- More flexible way to pay for and/or manage the network
- Partner provided implementation, account management, and optional partner services
