According to a research by enterprise strategy group (ESG), customers report the following as top networking challenges:

32%
Lack of integrated security

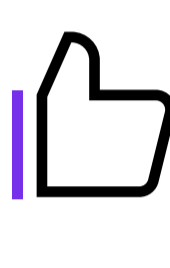

31%
Complexity of environment

30%
Lack of automation

How can cloud-managed networking help?

Networking teams are turning to the cloud to speed new service delivery, reduce costs, gain better visibility, and to deliver:

Enhanced business agility

Improved operational efficiency

Reduced risk

Benefits of Aruba Central

Aruba Central is an AI-powered, cloud-native network management solution that provides a single point of visibility and control for wireless, wired, WAN, and remote network infrastructure. According to an Economic Validation study by ESG, Aruba Central can:

Lower cost of network administration by **up to 67%**

Lower total cost of ownership (TCO) by **up to 40%**

Includes cost of network administration, employee productivity, network downtime, acquiring and operating additional hardware, and licenses.

Total administrative savings can be further broken down into:

48%
Less Time

Deploying, onboarding, and configuring new network devices

69%
Less Time

On daily administration with multiple tools and tabs, monitoring and reporting, and identification and remediation of issues

62%
Less Time

Performing controller, appliance, and AP management, maintenance, and upgrades

95%
Less Time

Identifying, categorizing, and securing new devices on the network

Why cloud-managed networking with Aruba Central?

Aruba Central lowers the expected cost of network-related administration and total cost of network management with:

- 
Unified workflows
- 
Full-stack AIOps
- 
Built-in security
- 
Open APIs and webhooks
- 
Flexible consumption

What are customers saying about Aruba Central?

 "To do a complete school deployment, it's gone from days to hours."
Head of network operations
Regional school system

 "We used to have six people on-premises managing our networks, but with Aruba Central, just two people can easily do the same work, and the other four can focus on other activities."
CIO
Large retail organization

 "It used to be almost taboo to even upgrade any network device because it would take so long, and it would take everything down. Now, it's a regular thing. We deploy the changes throughout the night, and then it's good to go."
Network engineer
Large construction company

 "Aruba enabled us to pinpoint, in just a few hours, that continuous broadcasts and multicasts from a decommissioned SIEM server were saturating our network. Without the Aruba solutions, such troubleshooting would have taken us days and possibly some service interruptions."
Director of infrastructure
Large financial services provider

Make the shift to cloud-managed networking with Aruba Central

Join the 120,000+ customers who rely on Aruba Central to simplify day-to-day network operations, reduce cost, and improve IT efficiency.
