

Why healthcare organizations choose HPE Aruba Networking

HPE Aruba Networking solutions enable personalized patient digital experiences, efficient management of connected devices, and advanced network automation to drive digital transformation in healthcare organizations.

 **>80%**

of IT decision makers believe connected medical devices will have a significant impact on their organization in the next five years.¹

 **76%**

of clinicians surveyed believe telehealth will make up a majority of patient care by 2025¹

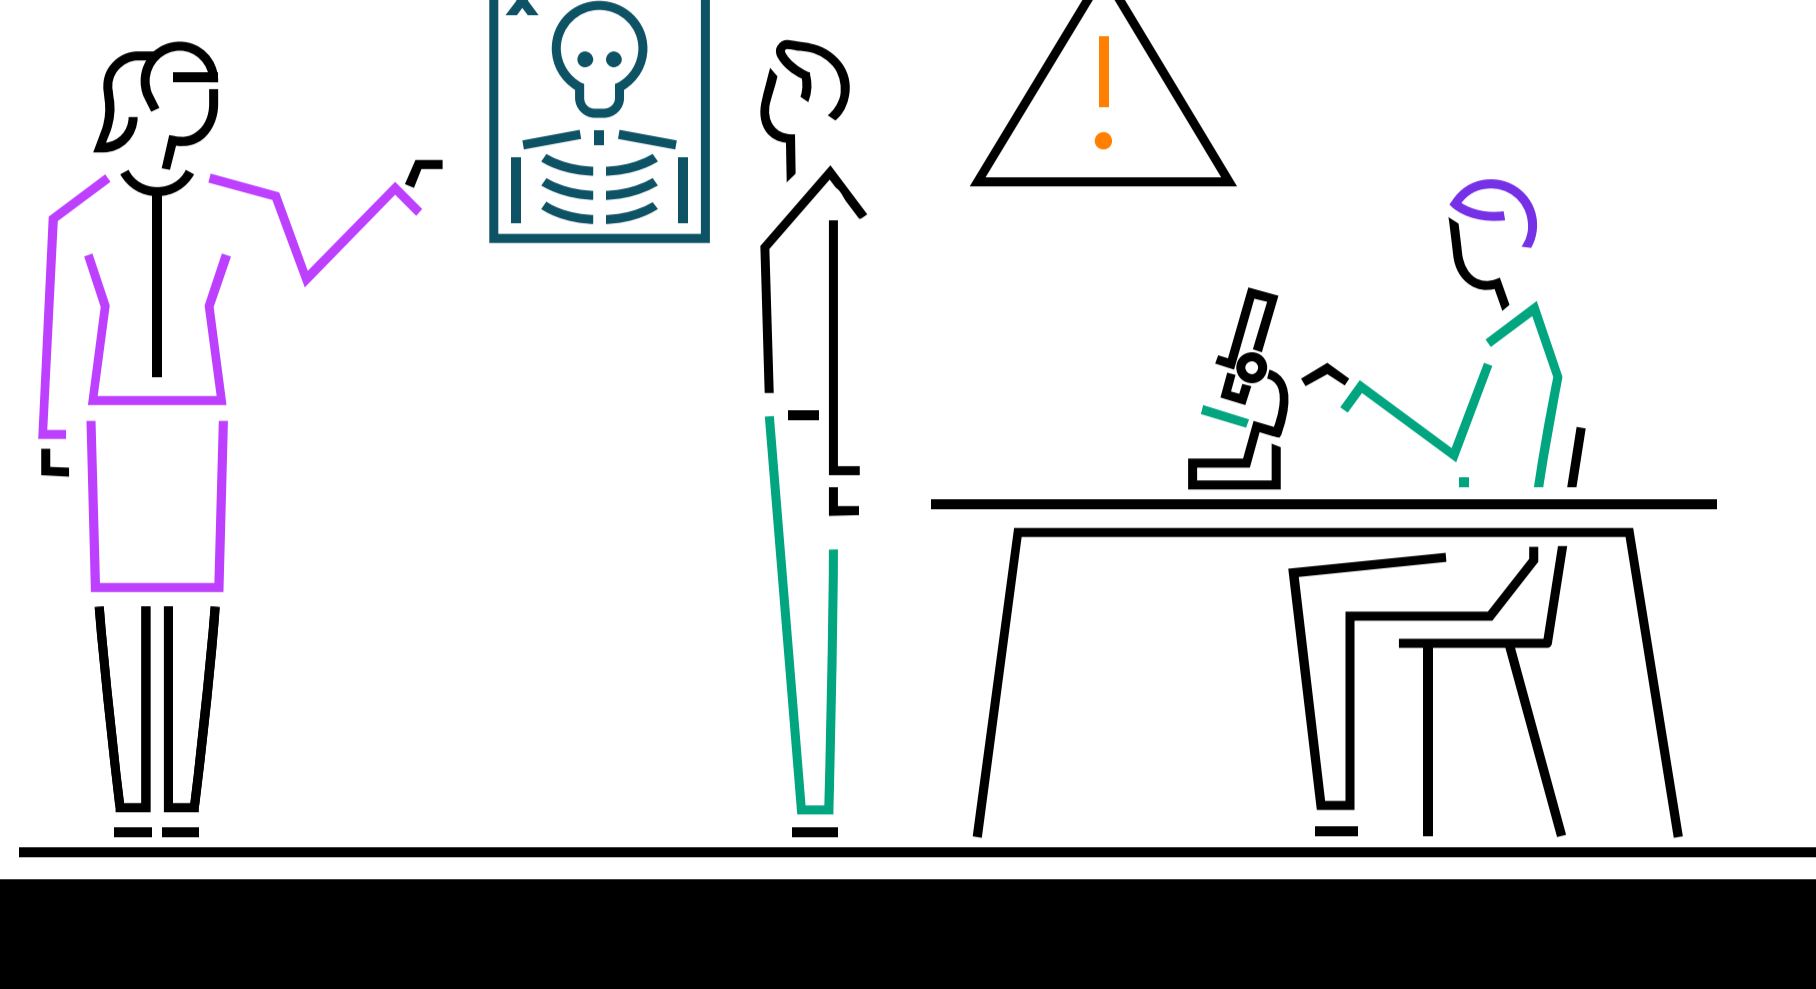

Evolving healthcare networks

 **50%**

Life science and healthcare provider companies will increase investments in AI and advanced analytics by 50% by 2022 to avoid future supply chain disruptions²

 **70%**

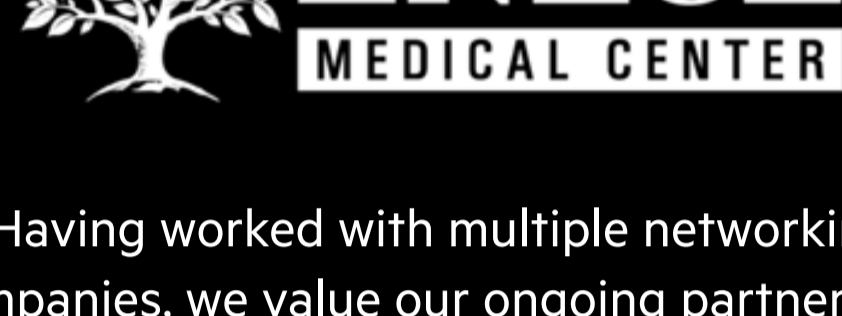

Digitally enabled remote care and clinical trials will drive 70% growth in spending on connected health technologies by providers and life science companies by 2023²

HPE Aruba Networking customers speak out

Accelerates new site deployments from up to 25 minutes to about 5 minutes with just a few mouse clicks.

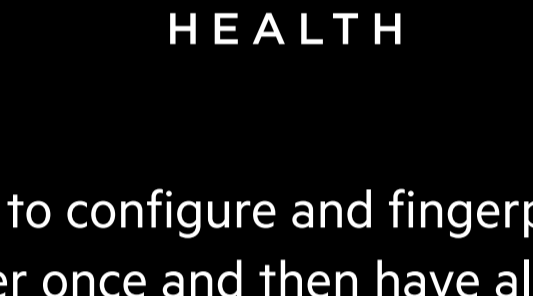

"Having worked with multiple networking companies, we value our ongoing partnership with Aruba as the best we've experienced by far. Aruba's solutions perform as advertised, they're issue-free, and they're extremely agile. In short, they just work."

Christopher Webb, Director of Technology

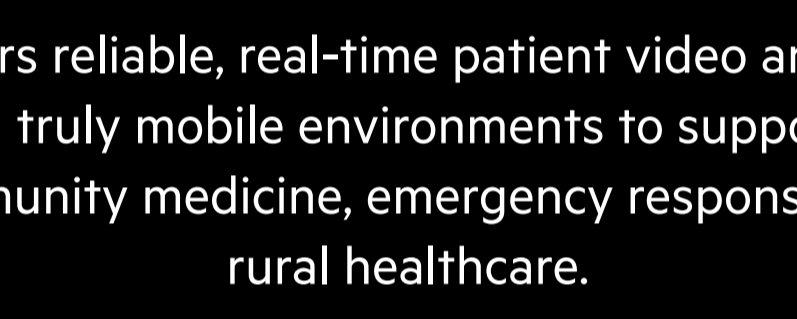

Children's of Alabama[®]

Leading pediatric medical center streamlines operations, saving up to 33% on maintenance costs, and enables IoT with more than 100,000 connected devices.

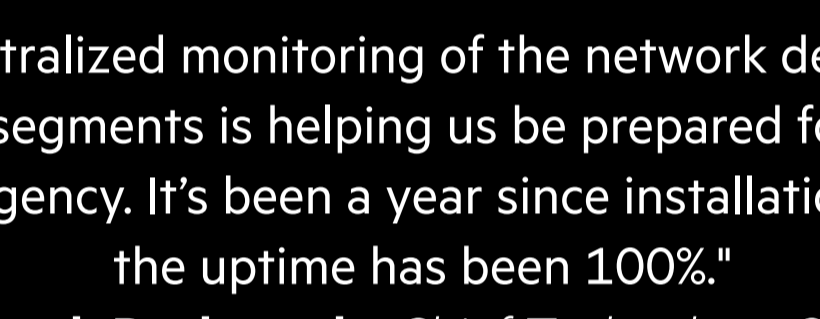

"Being able to configure and fingerprint a device like a printer once and then have all of the same devices automatically perform all of the appropriate segregated VLAN is huge."

Evan Grosz, Director of IT Technical Services

Delivers reliable, real-time patient video and data in truly mobile environments to support community medicine, emergency response, and rural healthcare.

"Centralized monitoring of the network devices and segments is helping us be prepared for any emergency. It's been a year since installation and the uptime has been 100%."

Unmesh Deshpande, Chief Technology Officer

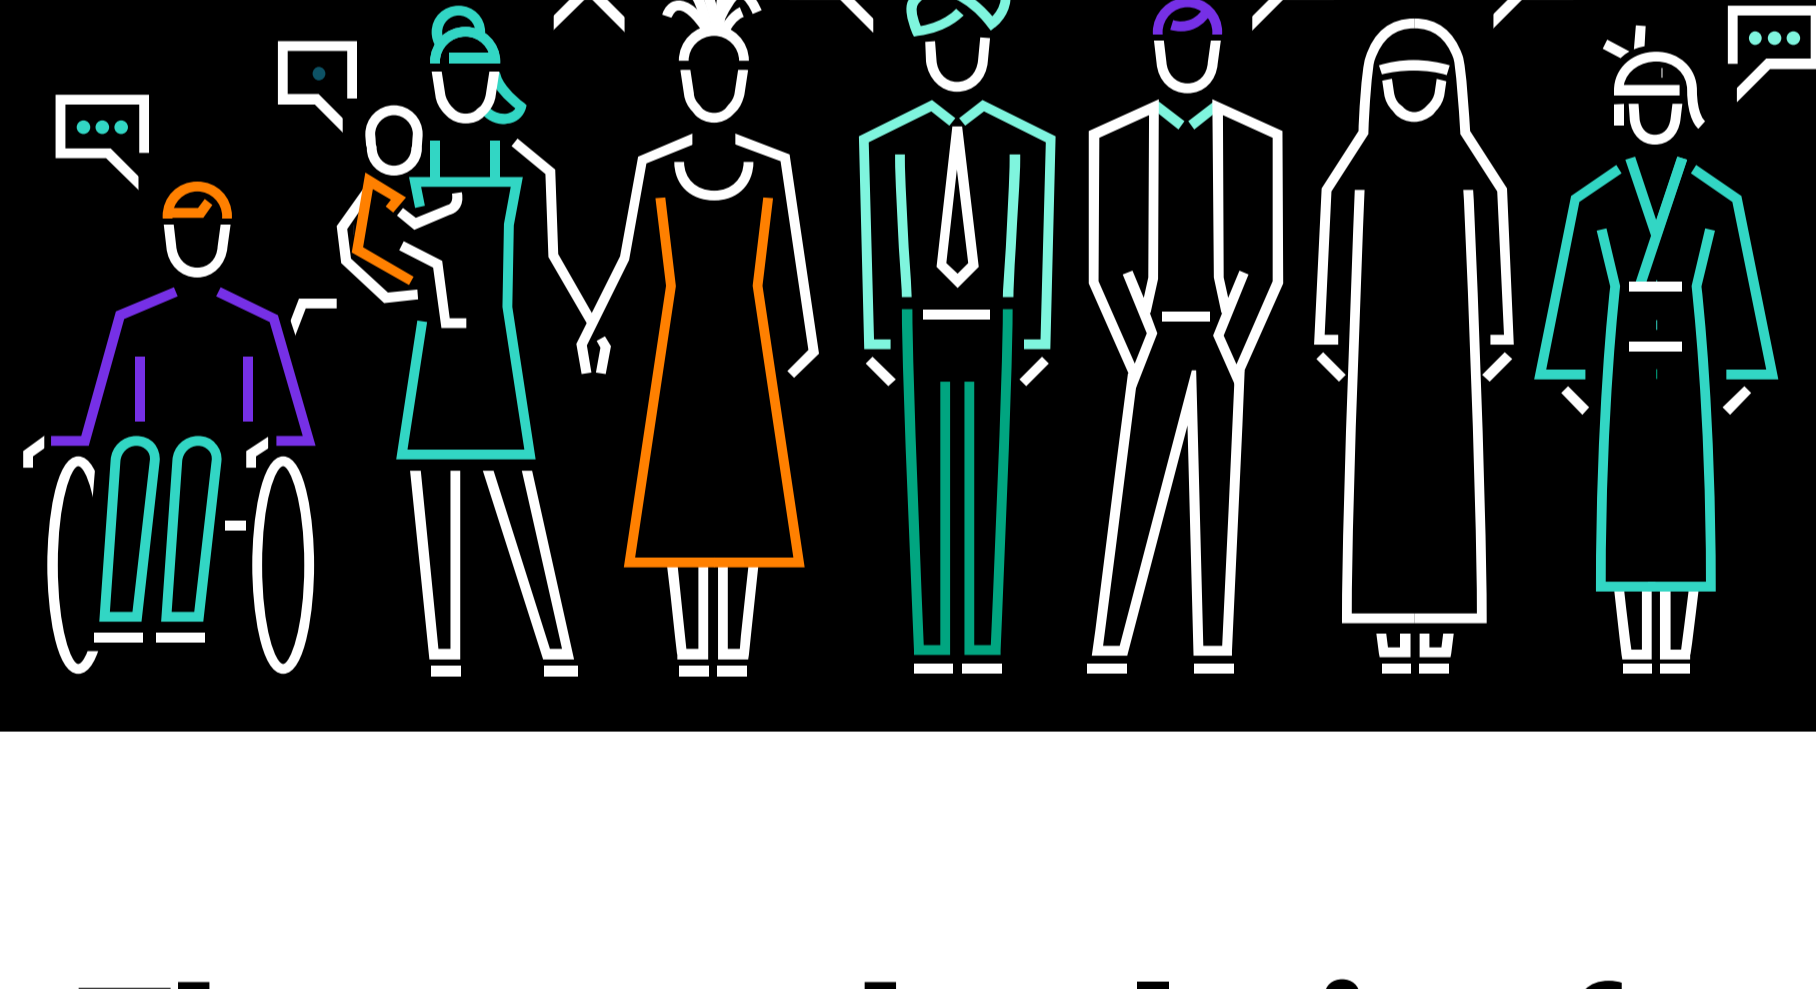

Reduced WAN traffic by 75 percent while increasing available bandwidth 4-6X.

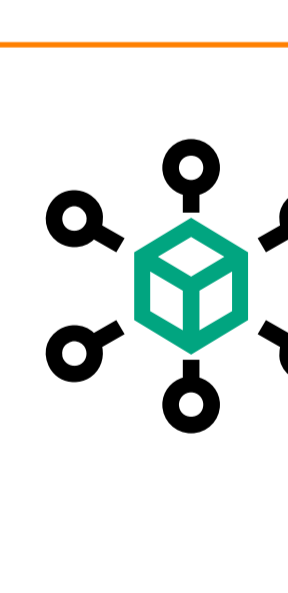

"Having a more modern, advanced, and intelligent network lets us continue to innovate, resulting in improved patient experiences and outcomes. That's the benefit Aruba delivers to our organization."

Brian Sterud, CIO, Faith Regional Health Services

The network solution for today's healthcare challenges

Join other hospitals, clinics, and medical centers around the globe who are using Aruba ESP (Edge Services Platform) to drive personalized healthcare, operational efficiency, and secure networks.

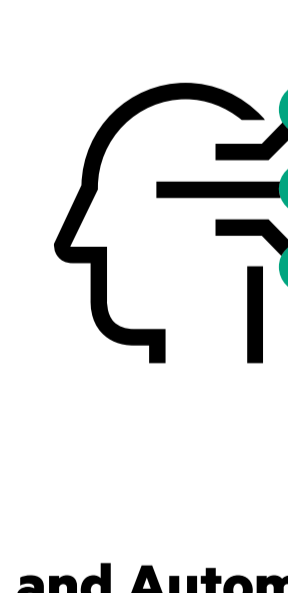

Unified Infrastructure

Unify hospitals, clinics, mobile pop-up sites and telemedicine services with converged management of wired, wireless, and WAN networks onto a single cloud-native platform.

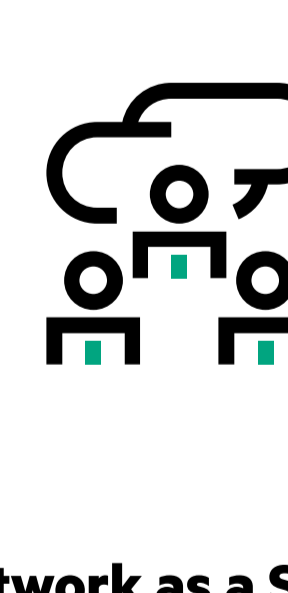

Edge-to-Cloud Security

Deploy IoT, biomedical devices and other technologies with zero trust confidence, ensuring your patient data, provider data, administrator data, and device traffic stay segmented.

AI and Automation

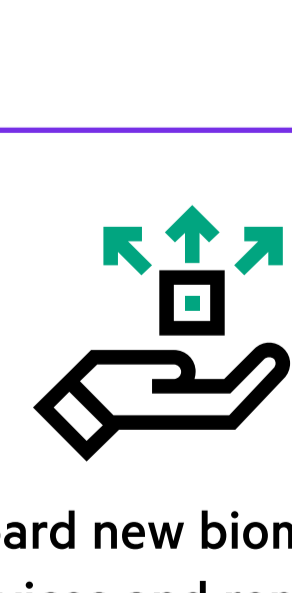

Stay ahead of issues and focus on patient care by leveraging big data and AI. Automate IT operational processes such as root cause determination and network optimization.

Network as a Service (NaaS)

Focus on better patient experiences and enabling new technologies. Network as a service (NaaS) enables financial flexibility and the ability to scale as needed.

ESP use cases

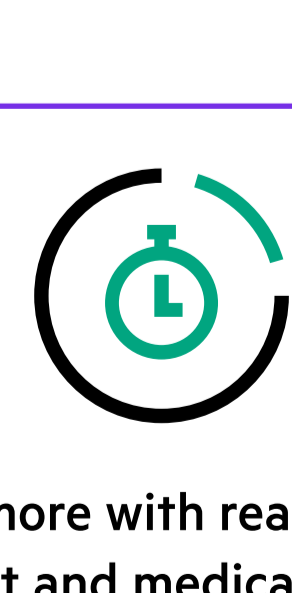

Onboard new biomedical devices and remote locations faster

Ensure always-on connected users and medical devices

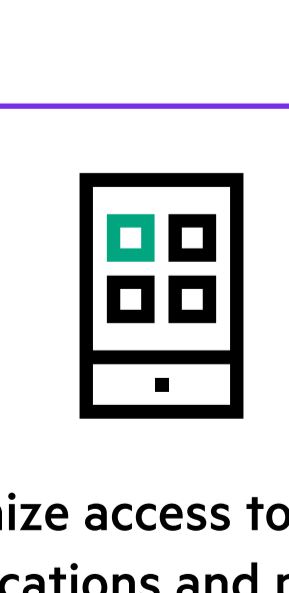

Enable seamless connectivity for telehealth

Do more with real-time patient and medical device location insights

Support wayfinding within large healthcare facilities

Optimize access to critical applications and patient health records
