The Data Center Design Essentials webinar presented by HPE Aruba Networking Education Services will introduce you to designing secure, high-performing data center network infrastructures consistent with appropriate validated solution guides per business needs.

Webinar Overview:
Architecting a data center solution in response to a Request for Proposal involves collecting and analyzing critical requirements from relevant customer stakeholders. In this 2-hour webinar, you will learn the basics of modern data center design, such as an EVPN-VXLAN overlay built on a spine-and-leaf routed underlay.

Learning Objectives:
- Understand how to use Aruba CX switches to build a modern data center based on spine-and-leaf architecture and EVPN-VXLAN.
- Discuss securing traffic with the Aruba CX 10000 to provide 800G of distributed stateful firewall for east-west traffic and zero-trust segmentation.
- Learn about the benefits of dynamic overlays using EVPNs.
- See how Aruba Fabric Composer (AFC) automates initial provisioning, ongoing configuration, and Aruba Data Center EVPN fabric management.
