

# Deployment and Migration Services

Our Professional Services engineers have developed workflows and automation tools to accelerate deployment of new technologies and minimize the risk of production outages during network migrations and upgrades. We leverage our extensive knowledge to complement the skills of your IT team, or those of your partner, and help you ramp up on our next generation solutions. We also help your team prepare for operational support by performing post-deployment reviews.

You may select from pre-defined QuickStart Services that do not require a statement of work (SOW). Options are available for wired, wireless, and ClearPass deployments, or choose the 5-day Remote Service for a flexible engagement. Our migration services enable you to efficiently transition from prior to current versions of HPE Aruba Networking technologies or from third-party vendors. For large scale transformations, we can work with you to define a custom engagement, aligned to your time and project needs, using a statement of work.

## QuickStart Services | Migration Services

### QuickStart Services

Rapidly deploy the latest HPE Aruba Networking technology. Discover the benefits quickly, learn best practices, and be prepared to transform your environment at your own pace.
