Register Part 1

Register Part 2

The Aruba CX 10000 Switching Essentials webinar series presented by Aruba Education Services will focus on managing the CX 10000 Switch with AMD Pensando.

What you'll learn:

Learn how to utilize Aruba Fabric Composer and Pensando Policy Service Manager for stateful firewalling and secure segmentation. Understand flow-based, session-level telemetry, which provides access to all network state information for visibility and analytics. Learn how to leverage this data center switch to provide software-defined stateful services where data is processed to optimize network bandwidth and improve security posture.

Objectives:

- Understand the Aruba CX 10000 switch key features
- Manage network services with Aruba Fabric Composer
- Implement policy and network segmentation
- Utilize analytics to monitor traffic flow and detect trends and security incidents
