The Aruba Data Center Essentials webinar presented by Aruba Education Services will introduce you to the modern and flexible data center network using Aruba CX Switches.

What you'll learn:

Aruba CX switches provide a robust platform for Layer 3 services in the data center. In this 2-hour webinar you will learn the basics of the modern data center design with an EVPN-VXLAN overlay built on a spine-and-leaf routed underlay.

Objectives:

- Understand how to use Aruba CX switches to build a modern data center based on spine-and-leaf architecture and EVPN-VXLAN.
- Learn about key benefits to enterprises with growing on-premises workloads and workloads spread across multiple data centers.
- Learn about the main EVPN route types and the purpose of each type.
- Learn how Aruba Fabric Composer (AFC) automates initial provisioning, ongoing configuration, and management of an Aruba Data Center EVPN fabric.
