End-of-Life Announcement for ArubaOS 3.3-FIPS

Aruba, a Hewlett Packard Enterprise company is announcing end-of-life for ArubaOS 3.3-FIPS. This announcement affects all ArubaOS 3.3-FIPS minor releases, maintenance releases, patch releases, and other derivatives. The last date this software will be supported by Aruba Technical Support is February 28, 2013.

ArubaOS 3.3-FIPS may be replaced by the following software releases, which provide equivalent functionality in addition to new features and new hardware platform support:

- ArubaOS 3.4-FIPS
- ArubaOS 6.1-FIPS

Definitions

- General Availability (GA) Date: The first date a major or minor software release is made available to customers.
- End-of-Life Announcement (this document): Date of official end-of-life notice.
- End-of-Development (EOD) Date: The date on which Aruba Engineering ceases further modification of software. Aruba does not create or make available maintenance releases or patches for software that has reached the EOD milestone except in the event a security vulnerability is found.
- End-of-Support (EOST) Date: The last date a product will be supported by Aruba. During the period between End of Development and End of Support, Aruba Customer Advocacy will continue to investigate, troubleshoot, and characterize issues in an attempt to provide solutions and workarounds using the production releases. If a solution cannot be found using software that has reached the EOD milestone, Aruba Customer Advocacy will require that the system be updated with a more recent software release. After a software release reaches the EOST milestone, the software image will be removed from the Aruba support website, and Aruba Customer Advocacy will provide support only on a commercially reasonable effort basis.

End-of-Life Milestones

- General Availability Date: April 28, 2009
- End-of-Life Announcement: August 24, 2012
- End-of-Development Date: November 30, 2012
- End-of-Support Date: February 28, 2013
